DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 5, 9, 13, 20 and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Hashimoto (U. S. PAT. 5,825,204).

In claim 1, Hashimoto teaches all claimed features in Fig. 1, an inspecting circuit of a semiconductor device comprising: a plurality of input terminal (5 has 16 input terminals) which is inputted with signals from a plurality of signal lines respectively; and two output terminals (input terminals for 104) at which an output of inspection can be obtained, wherein a determination (104) whether the semiconductor device is normally operated or not is performed by two signals obtained at the two output terminals (outputs from both 103).

Claims 5, 9, 13, 20 and 21 correspond to detailed circuitry already discussed similarly with regard to claim 1.

3. Claims 2-4, 6-8, 10-12 and 14-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. Claims 17-19 appear to comprise allowable subject matter.
